

AIRX Spray N Go Pathogen Control System

The most comprehensive germ control program on the market today

FAQ (Frequently Asked Questions)

Do I need to rinse or wipe after the using of Airx Spray N Go?

Rinsing or wiping Airx Spray N Go is not required on surfaces other than the ones that have food contact. For general use, follow the Spray N Go Disinfectant directions: Spray area until it is covered with the product. Allow surface to remain visibly wet for the required contact time (see efficacy data or label for proper dwell time). No scrubbing necessary. Allow treated surfaces to air dry or wipe off with a clean (cloth) (mop) (sponge).

Food Contact Surfaces:

When using on food contact surfaces: countertops, stove tops, highchairs, kitchen appliances, follow the disinfection direction for use, and then thoroughly rinse all food contact surfaces with potable water. This product must not be used on eating utensils, glassware, dishes and cookware. A potable water rinse is only required when applying to food contact surfaces.

Exercise equipment and other skin contact surfaces:

If you are spraying exercise equipment, helmets, veterinary tables, etc. or surfaces that would come into immediate and repeated contact with the skin, it is an acceptable practice to wipe surfaces after the proper dwell time to offer an extra level of caution for those that have easily irritated skin.

Most touch surfaces like door handles, water fountains, toilet handles, faucets etc. which are not food contact surfaces do not require wiping. Surfaces need to remain visibly wet for the required contact time.

Overspray onto floor surfaces:

Airx Spray N Go has pH of 11.5 so it is alkaline. If you are treating touch surfaces and are concerned about overspray effect on floor finish it is recommended that you wipe off with a clean (cloth) (mop) (sponge).

General Surfaces:

General disinfection with Spray N Go does not require wiping or rinsing. On surfaces such as mirrors, high gloss stainless steel, chrome etc. where a polished look is desired, wiping is suggested.

Residue Issues:

Airx Spray N Go versus a typical diluted disinfectant cleaner- There is no more or less residue left behind with the use of Spray N Go. The main difference would be that since Spray N Go has much shorter dwell time so you would be applying less product for each application. A 10 minute dwell time would require a lot more product to be applied than a 5 second-2 minute dwell time.

Can I use Spray N Go with other sprayers:

Yes you can use Spray N Go with the Clorox 360, Victory and conventional trigger sprayers.

How should I label the sprayer when using Spray N Go?

Each case of Spray N Go gallons come with 4 secondary labels in the case and you can order more if needed.
